EDUCATION

University of Alberta, Bachelor of Science in Computer Science

Jan 2028

SKILLS

Coding Languages	JavaScript, TypeScript, Python, Java, HTML, C, C#, C++
Frameworks	React, Node.js, Next.js, Vite, CSS, Selenium, NumPy, pandas, REST API
Databases & Tools	MySQL, SQLite3, Supabase, DynamoDB, Git, Unix, Firebase, AWS, Docker, Figma, Framer Motion

WORK EXPERIENCE

Amazon Software Engineering Intern – React, AWS Lambda & CloudWatch

May 2025 – July 2025

- Built a self-service internal web application (React) that let 5 engineering teams deploy and manage their own alarm configurations, replacing a manual process
- Developed automation using AWS Lambda and CloudWatch to provision alarm points programmatically, reducing hands-on setup for each team
- Collaborated in an Agile team on iterative delivery and rapid problem-solving

SOFTWARE APPLICATIONS

IceIQ (Fantasy Hockey Analytics Platform) — React, Vite, Python, AWS Lambda, API Gateway, September 2025 – Ongoing
DynamoDB, SQS, Clerk

- Built and shipped a multi-user SaaS analytics platform serving 100+ users, integrating with the Yahoo Fantasy API to deliver standings, power rankings, luck index, and weekly recap analytics across user-owned fantasy hockey leagues
- Designed a serverless backend on AWS (Lambda, API Gateway, DynamoDB) with SQS-based fan-out for daily data sync, JWT-authorized league-scoped APIs, and per-user OAuth token management, running at effectively \$0/month within AWS Free Tier
- Implemented Clerk-based authentication (email/Google/Apple) with league-membership authorization for secure multi-tenant access
- Built a responsive React frontend with a collapsible sidebar, mobile bottom-nav, and shareable PNG matchup cards; covered critical user flows with Playwright E2E tests

DraftNight (Fantasy Draft Lottery Platform) — Next.js, TypeScript, Supabase, Playwright

July 2026 – Ongoing

- Built a Next.js and Supabase web app for running live, link-based fantasy league draft-order lotteries with animated pick-reveal results, requiring no accounts or sign-in for viewers
- Enforced multi-tenant security with Supabase Row-Level Security policies and token-based API routes; covered core logic with a full unit, integration, and Playwright E2E test suite

FantasyTracker (Fantasy Hockey Stat Visualizer) — Python, pandas, matplotlib, Yahoo Fantasy API

December 2025 – Ongoing

- Built a Python pipeline that authenticates with the Yahoo Fantasy API via OAuth2 and generates automated stat infographics, seasonal awards, and a Monte Carlo playoff-cutoff projection
- Refactored the codebase for production quality (type hints, centralized API error handling) and added a 69-test pytest suite covering the stat-calculation logic

ChadGPT (Local LLM Chat Application) — Python, FastAPI, llama.cpp

September 2025 – Ongoing

- Built a self-hosted chat application streaming responses from a locally-run LLM through a FastAPI backend, with optional live web-search grounding and a multi-hop deep-research mode
- Designed the system to run entirely on local infrastructure with no cloud dependency, keeping model inference and conversation data on-device
